Swiper Yes Swiping

#2D Prank-themed
#Strategy

Cooperation

Xiangming Wang: Designer

Feifei Liu: Artist

Xi Lin: Programmer

Game Overview:

Play as a mischievous thief out to cause chaos at a supermarket. Sneak in at night and plant prank items throughout the store, setting up surprises that disrupt customers' shopping the next day. Designed to be lighthearted and playful, the game lets players enjoy the fun of making mischief. Plan your pranks carefully, discover clever combinations, and watch your schemes unfold in unexpected ways.

EARLY-STAGE DESIGN

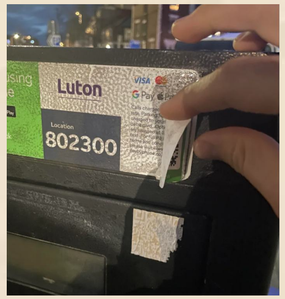

The game draws inspiration from the prank and evasion mechanics of Neighbours from Hell, the grid-based stealth of Invisible, Inc., the emphasis on anticipating outcomes through clear information in Into the Breach, and the use of objects to influence NPC behavior in Ghost Master.

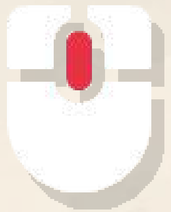

Inspired by real-world counterfeits, malicious QR codes, and consumer scams, we transformed these practices into exaggerated, humorous prank items that players strategically place to disrupt unscrupulous shops.

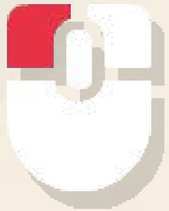

CONTROL

Pan Camera
Hold the middle mouse button and drag.

Zoom
Scroll the mouse wheel

Interact
Left-click

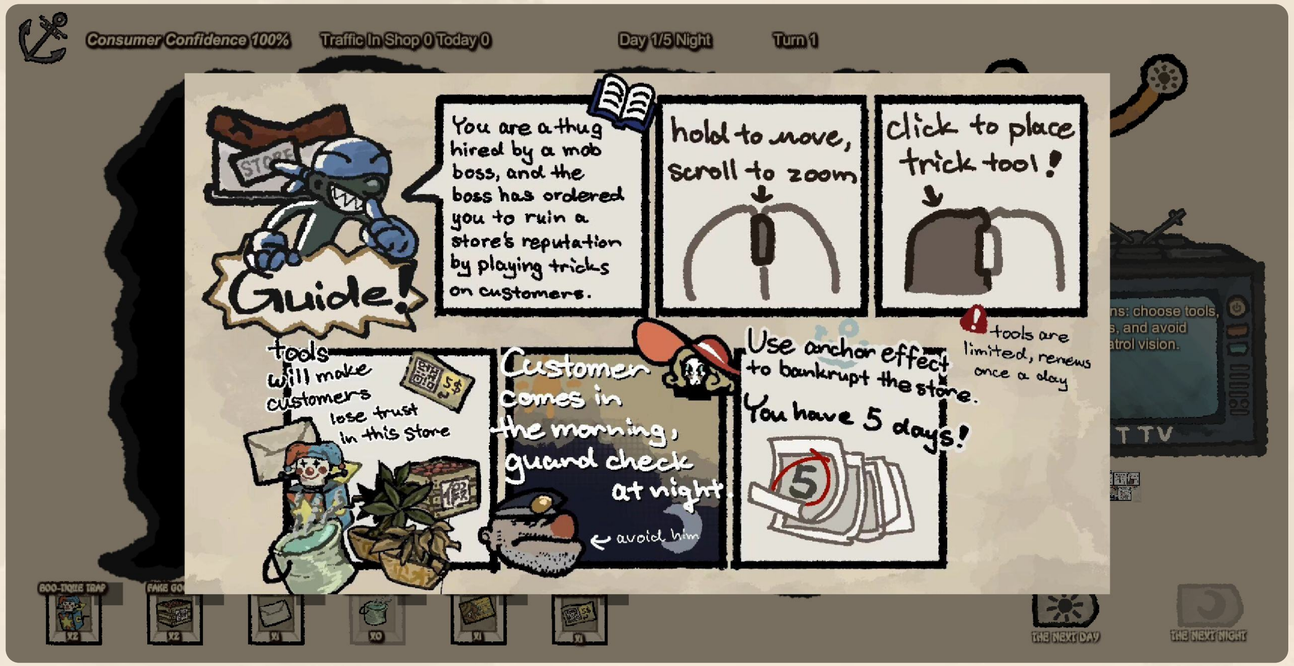

Deselect
Right-click

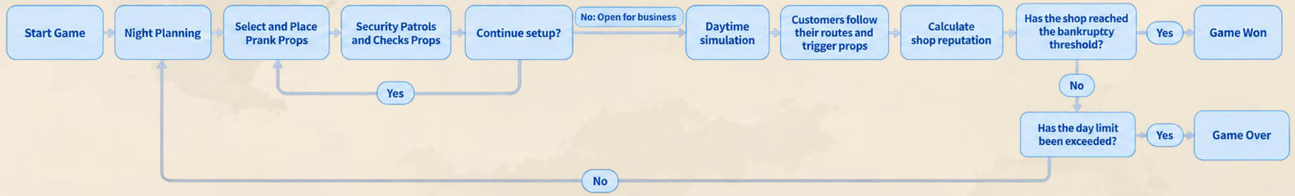

The game uses simple mouse controls for navigation and interaction. Hold the middle mouse button and drag to pan the camera, and scroll the wheel to zoom in or out. Left-click to select or interact with objects, and right-click to deselect, making it easy to explore and manage the scene.

GAME MECHANICS

This game is built around a ***day-night cycle*** featuring a two-phase loop

Game Flow

Preparation Phase – Night: Slower-paced gameplay focused on strategic planning, item placement, and risk avoidance.

Resolution Phase – Day: Faster-paced gameplay where players watch their strategies unfold and enjoy positive feedback.

Night Phase:

At night, players place quirky prank items, such as jump-scare boxes and fake cards, on store shelves to lower customer satisfaction. They must avoid patrolling guards who disable placed items and predict customers' daytime routes to find the most effective locations.

Each night, the police randomly ban one item type. Combined with time pressure, these restrictions encourage players to adapt their item choices and placements rather than rely on a single strategy.

Day Phase:

Players observe customer routes, lingering or avoidance, and prank item effects, then review the drop in store satisfaction. These insights guide the next night's item placement and strategies, allowing players to test new layouts and compare outcomes across successive days.

FINAL SHOWCASE

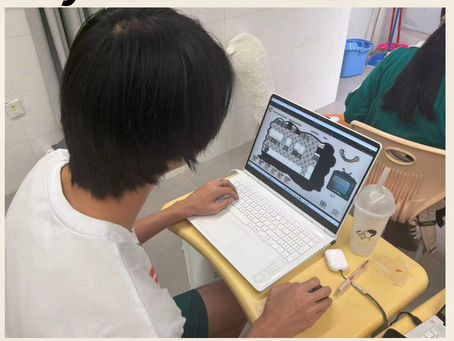

PLAY TESTING

Playtest Feedback

- Unclear Patrol Routes: Players struggled to predict security movements, making some trap failures feel unfair.
- Limited Trap Feedback: Players found it difficult to understand why certain traps succeeded or failed.
- Confusing Financial Goals: The bankruptcy target and revenue progress were not always easy to track.

Future Improvements

- Visual Clarity: Add patrol indicators, trap previews, and clearer success/failure feedback.
- UI Optimization: Improve financial displays and provide real-time progress updates.
- Gameplay Depth: Rebalance difficulty and introduce more varied customer behaviors to encourage strategic experimentation.
